

# Manual

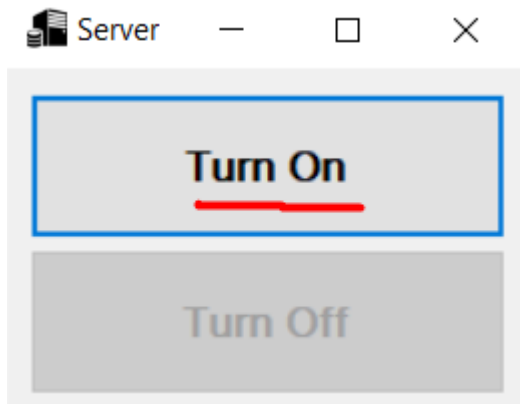

First of all, set the settings for the “settings.cfg” file in the “Reader” and “Parser & Server” directories.

```
1 ip=127.0.0.1
2 port=8005
```

## Guide for the server.

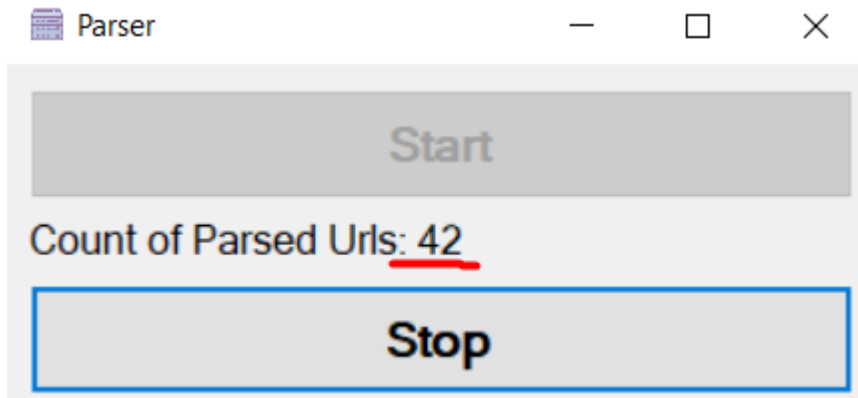

Set current server ip and port.

On the server, run “Server.exe” and “Parser.exe”,

then turn on the server.

After launch "Parser.exe"

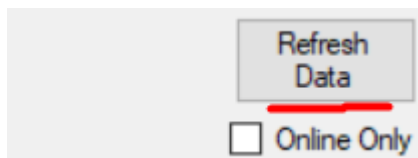

parsing sites starts automatically.

After each cycle, the parser saves data about sites in the file "CurrentData.bin", which is then transmitted to the client.

### Guide for a client.

Run "Reader.exe" and push the "Refresh Data" button.

When data transpoting has been done, you can read current parsed data about sites.

ID	Date/Time	Url	Game Name	Category	User Name	Reviews Count	Registered Time	Online Status	Server	Server Name	Side	Amout	Price/1000
